Linkedin | Portfolio | Github

Hands on projects:

- E-Commerce:
  - **Stack: HTML, CSS, JS, React, React-Router, Material UI, MongoDB, Node.js, Express.js.**
  - Online clothes shop with login interface and admin management, in this project I used authentication and secure routing, the website design was created for me by a volunteer designer, I was in contact with the designer on a daily basis and experimented with **Figma platform**, for the product data I also had to experiment with the **Rapid API platform**, additionally I switched between a webpack of CRA to VITE for better performance.
  - Deploy link
  - Github repo

- Memory Card Game:
  - This was my first project using **HTML, CSS, and Vanila JavaScript**. During the course, I was given only an HTML and CSS file for a game, and I had to implement the game using vanilla JavaScript. At first, it seemed difficult because I had to understand code that I didn't write and try to figure out how the game's creator had planned for it to work. It was a small and simple project, but I'm very proud of what I was able to achieve.
